

Tsui-yi. The glen is short but steep and is called She-lü-lü-t'o, meaning S
"Iron nuggets steep place," from the fact that iron was once mined here. 487*
The elevation of this part of the valley is 9,600 feet. A short distance below 133*
the pass, Pa-erh-shao 瑞耳勺 [also called Pa-erh-ch'iao], is visible. 137*
The little village is situated on a very fertile plain, but has been almost abandoned because of Lo-lo depredations. Beyond the spur south of Pa-erh-shao, and still belonging to Yung-ning, is the hamlet of Pai-chio-pa 白角壩 in Lang-ch'ü T'u-ssu territory. The distance from A-ngu valley to She-lü-lü-t'o is 22.5 li.

The trail descends the narrow glen and leads out into the great valley of Tsui-yi called in Chinese Wa-erh-lo 挖耳羅, where a magnificent view awaits the traveler; the entire Li-chiang snow range, like a huge sleeping dragon, appears on the distant horizon, but the third peak, Ha-ba ndshér nv-lv, is hidden by other ranges. Arrived in Tsui-yi valley the trail continues west between fields, in ditches and over rocks thrown there by the farmers. Most of the settlers in the upper part of this valley are sons of Han (Chinese). Any trail passing between fields is always the recipient of all the rocks the peasants can find in their fields. It also serves as irrigation ditch, the water from one terraced field being allowed to overflow on to the trail, to irrigate a field lower down. When the water is not wanted lower down the path becomes the bed of a brook. The valley floor is terraced; in the southern valley wall is a broad amphitheater traversed by three streams which flow into the Tsui-yi Stream. Here are several hamlets collectively called Lō-bü. Beyond Lō-bü the valley narrows and the trail leads along the grass-covered hill-side (*Heteropogon contortus*), with here and there a hamlet of a few houses. Next to Hli-dü, Tsui-yi is by far the richest agricultural, rice-growing area in the Yung-ning territory. S [312]

Continuing on the northern valley slopes we come to the hamlet of A-ka-lo, elevation 8,000 feet. The houses are of mud, the roofs of boards weighted down with rocks. The trail follows the narrowing valley to a bridge near the hamlet of Wa-erh-lo, elevation 7,050 feet. Crossing the bridge over the torrent we continue on the southern slopes in the deep, narrow canyon which Tsui-yi has now become. Mile after mile, the entire stream-bed, rocks, water, etc., is a light green, from immense quantities of algae. The trail winds in and out of lateral canyons, is exceedingly narrow and leads several hundred feet above the roaring green torrent. S [342]

The Li-su of Ba-ssu-ko hamlet.— After crossing a lateral valley we ascend the mountain-side to a huge rock shelf or broad terrace, at an elevation of 7,050 feet. Here is the Li-su hamlet of Ba-ssu-ko, known in Na-khi as P'a-dä. The houses are regular pine log cabins, the roofs of pine boards weighted down with rocks. The latter become superfluous at pumpkin season for the entire pumpkin crop is stored on the roofs of the houses (PLATES 234, 235). The Li-su inhabitants when asked whence they had originally come, replied they did not know, except that they had settled in Ba-ssu-ko for many generations. They do, however, still speak their own language besides Hli-dü and Li-chiang Na-khi, as well as Chinese. Over 30 families dwell in this miserable conglomeration of huts, which look as if they had been ST [342] [251] •

dumped on a rock pile. ST [197]

PLATE 234. — THE LI-SU HAMLET OF BA-SU-KO

巴蘇科漢子

Ba-su-ko is situated on a terrace in the Tsui-yi valley at an elevation of 7,050 feet. It is the only Li-su village in this area. Note the pumpkins on the roofs of the houses.
